Dear OHA hiring team,

I am applying for **AI/LLM Systems Engineer (Information Systems Specialist 6), REQ-200385**. Below I address **minimum qualifications** and **desired attributes** as requested.

Minimum qualifications (option c): I hold a **Bachelor of Science in Computer Information Systems** (Cal Poly Pomona) and have **more than ten years** of information systems experience in **software development and data management**, including production web platforms, APIs, relational databases, and enterprise integrations in regulated, high-visibility environments.

Desired attributes:

- **Development discipline and prioritization:** I have led delivery for multi-team programs (customer, loyalty, and data integrations) with clear ownership, code review, and alignment to business priorities and operational standards. I work independently on scoped problems and escalate policy or cross-program conflicts early.

- **Microsoft / Python stack:** Strong production experience in **Python** and **JavaScript/TypeScript**, **SQL Server** and **PostgreSQL**, and Windows/Linux deployment contexts. I have used **Git**-based workflows daily for years and am prepared to deepen **Azure**, **.NET**, and **Azure DevOps** patterns used at OHA.

- **LLM-enabled documentation search:** I use **LLM-assisted development tools** (Cursor, Claude) in my own workflow and have built integration-heavy systems where **retrieval, logging, and safe failure modes** matter. I am motivated to apply that mindset to **internal documentation search**: practical retrieval design, guardrails, and measurable quality-not novelty for its own sake.

- **Integrations:** Extensive **REST API** design and consumption, outbound integrations, retries, and queue-style handoffs (commerce, marketing cloud, OMS). I am eager to apply the same integration discipline with **Azure API Management**, **Logic Apps**, **Service Bus**, and related services.

- **DevOps practices:** Comfortable with source control, automated testing habits, and review culture; willing to adopt **ADOS**, **SonarQube**, and security review tooling per OHA standards.

- **Public mission:** I am a **U.S. Army National Guard veteran** and am drawn to OHA's work on **health equity** and equitable access to services. I communicate clearly with non-technical partners and document systems so the next engineer or analyst can operate safely.

I am available for **hybrid work in the Salem area** as described. Thank you for considering my application.

Best regards, Terry J. Mork
