Dear EIS hiring team,

I am applying for **Information Architect (Information Systems Specialist 6), REQ-199857** in **Strategy and Design**.

The role's focus-aligning **business capabilities**, **information domains**, and **technology**; supporting **enterprise standards**; mapping relationships among processes, applications, and data; and producing durable **documentation**-matches how I have operated during large **platform migrations** and **integration programs** in complex enterprise settings.

I am strongest where architecture meets **execution discipline**: clarifying non-functional requirements (security, operability, ownership), translating agency pain points into **integration patterns** teams can repeat, and preserving **traceability** so audits and future modernization do not start from zero. I have partnered with product, operations, and engineering leads who do not share the same technical vocabulary and have mentored engineers through **API contracts**, **data boundaries**, and release coordination.

I hold a **BS in Computer Information Systems**, am a **U.S. veteran**, and welcome **hybrid** collaboration in the Salem area. I would value discussing how EIS measures "fit for purpose" across proposed agency solutions and how this role interfaces with **Data Governance and Transparency** initiatives.

Thank you for considering my application.

Best regards, Terry J. Mork
