Dear EIS hiring team,

I am applying for **z/OS Systems Administrator (Information Systems Specialist 8), REQ-196649**.

The position calls for **advanced IBM Z / z/OS** expertise-capacity planning, subsystem configuration, vendor evaluation, and high-severity troubleshooting for **shared statewide services**. That is **not** the primary focus of my recent hands-on work, which has centered on **distributed applications, SQL-heavy platforms, and enterprise integrations**.

What I offer is a **strong operations mindset**: disciplined change management, written operational clarity, cross-agency coordination, and calm execution when services are degraded. If EIS considers candidates who can grow into deeper **systems programming** depth with structured training, I am **explicitly willing to invest in z/OS skills** aligned with your standards. If the req requires Day-1 expert systems programming, I understand I may not be the right fit-and I still appreciate the mission this role protects.

I hold a **BS in Computer Information Systems**, am a **U.S. veteran**, and am motivated by **statewide infrastructure** that must remain dependable as security and complexity increase.

Thank you for reviewing my materials.

Best regards, Terry J. Mork
